

Light is germ fighting

Enhance patient safety

AirZing™ PRO UV-C fixtures for air and surface disinfection

The current pandemic has changed how people view public spaces, particularly in healthcare settings. Now more than ever, medical professionals are focusing on how to improve the overall health and safety of their patients and staff – not only during the COVID-19 pandemic, but for the future as well.

Light is OSRAM

OSRAM

UV-C: Ideal solution for medical and dental treatment rooms

Effective

99.9%
Disinfection
Effectiveness

Effective against the virus that causes COVID-19

Here's why...

- Medical and dental professionals require the highest level of infection control
- Treatment rooms (typically 10' x10') are ideal spaces for highly effective UV-C disinfection
- System is easy to validate for effectiveness using simple measurement methods
- Simple and low cost operation

AirZing™ PRO UV-C fixtures at work: Newtown Family Dentistry

At Newtown Family Dentistry in Newtown, CT, the extra level of protection that the AirZing fixtures provide has helped everyone at the practice feel more confident and secure.

Timers activate the fixtures for 30 minutes each evening, and UV-C dosimeter cards are used regularly to measure dose and validate proper system operation. When there was a spike in COVID-19 cases, a 30-minute disinfection cycle was also added during the lunch break, when the practice could be easily cleared of patients and staff.

“It is very reassuring to us, our patients and our employees that we are doing the most we can to ensure a safe environment within our practice here at Newtown Family Dentistry!”

Deidre M. Condon, DMD

Ready to restore confidence at your practice?

OSRAM is committed to providing high performance AirZing™ UV-C products along with the support needed to ensure safe and effective operation.

Get started now!

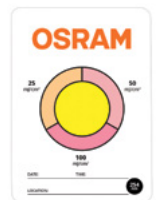

- 1 Determine number of fixtures and request quote**
Assess the size of the rooms requiring treatment and determine the number of fixtures needed. Application support is available from OSRAM or from an authorized AirZing dealer.

- 2 Choose your control source**
It's important to control your UV-C system separately from other sources. Digital timers work well. It is recommended that any switches for the AirZing PRO are kept secured and operated by trained personnel.

- 3 Schedule the installation and validate the system**
The AirZing PRO fixtures should be installed by a licensed electrician and can be easily validated using UV-C dosimeter cards.
