

Light is OSRAM

Traditional technology lives on Electronic Control Gears (ECG)

If old is still gold for you, we've got what it takes to maintain your success. Where others have given up is where we continue to play the game: OSRAM offers an extensive portfolio of traditional lighting solutions. It features the high-quality products and services you need, while acting as a one-stop shop for nearly every lighting application.

The traditional lighting market may be consolidating, but we have the ambition to support you for as long as possible.

Although newest LED and SSL technology has been the leader in the lighting industry for years now, traditional products are still in use. This is because there are cases where they still make sense. From cost-efficient T5 and HID lighting solutions to UV-C applications, traditional light sources continue to be a good or even better option. And this is where OSRAM comes in. With our wide range of ECGs, featuring dimmable and fixed-output options, we deliver the most efficient solution possible for your needs.

ECG products at a glance

ECG for fluorescent and compact fluorescent lamps

A wide range of switchable, dimmable and connected options for any application.

ECG for high-intensity discharge lamps

Switchable indoor and connected outdoor products for lamps ranging from 35W to 250W, for luminaire integration or independent mounting.

Electronic 12V transformers

A wide range of dimmable and connected products that can work with both low-voltage halogen and LED lamps.
